p.[7]-12.

INDIANS AND MOUND BUILDERS

The earliest inhabitants of West Virginia were the prehistoric
Mound Builders, the last of whom disappeared from this area around
1700. On the eve of its settlement by white men, the region had
become a hunting ground for several Indian nations, including the
Delaware, Tuscarora, Shawnee, Mingo, and Cherokee. Much of what is
known about the inhabitants of West Virginia prior to European
settlement is based upon archeological investigations. This sec-
tion lists resources concerning the prehistory and the archaeology
of West Virginia's earliest residents and the history of Indian
resistance to the advance of the white frontier. A few additional
sources on Indian warfare are listed under Military History: The
Eighteenth Century. The most extensive bibliography concerning
West Virginia archeology is the work by R. P. Stephen Davis, Jr.

Life, 2)
1767. Applegarth, J. D., and others. "46SU3 Revisited." PENNSYLVANIA ARCHAEOLOGIST 48:1 (Special issue, 1978) 1-103. "46SU3 is an extensive Fort Ancient village site located on the narrow flood plain of the New River Gorge in West Virginia. Evidence suggests that the site was occupied and differentially utilized principally during the 12th and 13th centuries A.D."
